NOTE

From:	General Secretariat of the Council
To:	Permanent Representatives Committee
Subject:	Proposal for a DIRECTIVE OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL on energy efficiency (recast) - Preparation for the trilogue

1. On 6 October 2022, the first trilogue concerning the revision of the Energy Efficiency Directive (EED) was held in Strasbourg. All institutions recognised the importance of this directive for the achievement of our common climate targets, also in the context of the current energy crisis provoked by Russia.
2. On 22 November 2022, a second trilogue was held again in Strasbourg. The co-legislators agreed that the eventual agreement would be a package, going beyond the key political articles that were on the agenda, in particular Articles 4 and 8. The CZ Presidency managed to find a constructive and balanced compromise on the definition of the thresholds for the application of the energy efficiency first principle in major investment decisions. Co-legislators agreed to continue the work at technical level in view of a third trilogue in December.

15772/22

ID/st

3. There were three technical meetings between the EP and the Council since the last trilogue, on 1, 6 and 8 December.
4. At the Energy Working Party meeting of 1 December 2022, the delegations were invited to indicate their positions and flexibilities on the Presidency's assessment and compromise suggestions drawn up on the basis of intense exchanges with the European Parliament and the European Commission and contained in documents WK 16744/2022 and WK 16749/2022.
5. In view of the 3rd trilogue scheduled for 14 December in Strasbourg, the basis for the discussion will be the four-column table contained in the Annex to this note. Against this background, the Presidency proposes to accept or partially accept European Parliament's amendments or Commission's text which are aligned or not incompatible with the Council general approach, namely lines: 24a, 204, 204a, 204b, 205, 205a, 207, 208, 208a, 209, 209a, 209b, 209c, 415a, 416, 419, 420a, 420b, 426b, 432, 437a, 437b, 437c, 437d, 437e, 437f, 437g, 437h, 437i, 437j, 466, 468, 470, 471, 472a, 473, 474, 474a, 476, 476a, 477a, 477b, 477c, 477d, 478, 478a, 478b, 479, 480, 480a, 482, 515, 516, 517, 518, 519, 521, 529a, 529b, 530, 533, 539, 543, 552, 558a, 558b, 560, 562a, 567, 571, 574a, 574b, 574c, 574d, 574e, 574f, 574g.
6. The Czech Presidency is seeking political guidance of the Permanent Representatives Committee (Coreper), particularly concerning the following questions:

Q1: Would your delegation support a definition of efficient district heating and cooling with a lower proportion of high efficiency cogeneration in the periods starting in 2035 and 2045?

Q2: How flexible can your delegation be in terms of supporting lower thresholds for the requirement to carry out the installation level cost benefit analysis in line with Article 24 paragraph 5 of the General Approach?

FOURTH COLUMN *explanations*

The **fourth column** contains Presidency compromise suggestions.

In that column, ***bold italics*** text indicates new text as it was proposed either by the EP or the Council.

Text in ~~*strikethrough italics*~~ indicates compromise text that is proposed to be deleted.

Where paragraphs are put in **[square brackets]**, these indicate wordings where further discussion is necessary.

Columns marked in green indicates where the Presidency proposes to accept the text, including possible amendments, or parts thereof, proposed by the EP.

Columns marked in **yellow** or **red**, indicates provisions addressed with the EP where the Presidency sees further discussion as needed.

Columns marked in white, indicate where discussion is still open.

Proposal for a DIRECTIVE OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL on energy efficiency, amending Directives 2009/125/EC and 2010/30/EU and repealing Directives 2004/8/EC and 2006/32/EC (recast) (Text with EEA relevance)

	will need to be significantly raised from the current level of ambition of 32,5%.	will need to be significantly raised from the current level of ambition of 32,5%. <u>An increased ambition of the Union's 2030 energy efficiency target can reduce the energy prices and be crucial in reducing greenhouse gas emissions, accompanied by an increase and uptake of electrification, hydrogen, e-fuels and other relevant technologies necessary for the green transition, including in the transport sector. Even with rapid growth of green electricity generation, energy efficiency can reduce the need of new power generation capacity. Increased energy efficiency is also highly important for the security of energy supply of the Union through lowering its dependence on import of fuels from third countries. Energy efficiency is one of the cleanest and most cost-efficient measures by which to address that dependency.</u>	will need to be significantly raised from the current level of ambition of 32,5%.

Recital 8a				

	Commission Proposal	EP Mandate	ST 10697/22 Council Mandate	Draft Agreement
18a			(8a) A number of Member States presented ambitious NECPs, assessed by the Commission as "sufficient", and containing measures that will allow these Member States to contribute reaching the collective targets for energy efficiency with a ratio larger than the EU average. In addition, a number of Member States have documented "early efforts" in achieving energy savings, i.e. energy savings above the EU average trajectories in the last years. In both cases, these are important efforts that should be recognised and be included in future EU modelling projections and that can serve as good examples of how all Member States can work on their energy efficiency potential to deliver significant benefits to their economies and societies.

	(45) The energy savings obligation established by this Directive should be increased and should also apply after 2030 . That ensures stability for investors and thus encourage long-term investments and long-term energy efficiency measures, such as the deep renovation of buildings with the long-term objective of facilitating the cost effective transformation of existing buildings into NZEBs. The energy savings obligation has an important role in the creation of local growth, jobs, competitiveness and alleviating energy poverty. It should ensure that the Union can achieve its energy and climate objectives by creating further opportunities and to break the link between energy consumption and growth. Cooperation with the private sector is important to assess the conditions on which private investment for energy efficiency projects can be unlocked and to develop new revenue models for innovation in the field of energy efficiency.	(45) ~~The~~ energy savings obligation established by this Directive should be increased and should also apply after 2030~~.~~ That ensures~~—~~ stability for investors and thus encourage long-term investments and long-term energy efficiency measures, such as the deep renovation of buildings with the long-term objective of facilitating the cost effective transformation of existing buildings into NZEBs. <u>Deep renovations that improve the energy performance of a building by at least 60 % are currently carried out annually in only 0,2 % of the building stock, and energy efficiency is significantly improved in only a fifth of the cases.</u> The energy savings obligation has an important role in the creation of local growth,~~—~~ jobs, competitiveness and alleviating energy poverty. ~~It~~ <u>It</u> should ensure that the Union can achieve its energy and climate objectives by creating further opportunities and to break the link between energy consumption and growth. 	count towards the achievement of the energy savings requirements. In order to calculate the impact of the measures introduced, only net savings, measured as the change of energy consumption that is directly attributable to the energy efficiency measure in question implemented for the purpose of Article 8 of this Directive , should be counted. To calculate net savings, Member States should establish a baseline scenario of how the situation would evolve in the absence of the measure in question. The policy measure in question should be evaluated against that baseline. Member States should take into account minimum requirements provided by the relevant legislative framework at Union level, and should take into account the fact that other policy measures may be carried out in the same time frame which may also have an impact on the amount of energy savings, so that not all changes observed since the introduction of a particular policy measure being evaluated can be attributed to that policy measure alone. The actions of the obligated, participating or entrusted party	count towards the achievement of the energy savings requirements. In order to calculate the impact of the measures introduced, only net savings, measured as the change of energy consumption that is directly attributable to the energy efficiency measure in question implemented for the purpose of Article 8 of this Directive , should be counted. To calculate net savings, Member States should establish a baseline scenario of how the situation would evolve in the absence of the measure in question. The policy measure in question should be evaluated against that baseline. Recital 90a				
100a			(90a) This Directive strengthens the protection of consumers introducing basic contractual rights for district heating, cooling and domestic hot water, coherent with the level of rights, protection and empowerment that the Directive (EU) 2019/944 has introduced for final customers in the electricity sector. Plain and unambiguous	

	Commission Proposal	EP Mandate	ST 10697/22 Council Mandate	Draft Agreement
			information should be made available to consumers concerning their rights. Several factors impede consumers from accessing, understanding and acting upon the various sources of market information available to them. The introduction of basic contractual rights can help, among others, in the proper understanding of the baseline of the quality of services offered in the contract by the supplier, including the quality and characteristics of the supplied energy. In addition, it can contribute in the minimisation of hidden or extra costs that could result from the introduction of either upgraded or new services after the signing of the contract and without the clear understanding and agreement by the customer. These services could concern the energy supplied, metering and billing services, purchase and installation or ancillary and maintenance services and costs related to the network, the	

	Commission Proposal	EP Mandate	ST 10697/22 Council Mandate	Draft Agreement
			metering devices, local heating or cooling equipment, etc. The requirements will contribute to the improvement of comparability of offers and ensure the same level of basic contractual rights for all European citizens regarding heating, cooling and domestic hot water, without restricting the national competences.

Transparency, for example by means of lists of certified energy services providers and available model contracts, exchange of best practice and guidelines greatly contribute to the uptake of energy services and energy performance contracting and can also help stimulate demand and increase the trust in energy services providers . In an energy performance contract the beneficiary of the energy service avoids investment costs by using part of the financial value of energy savings to repay the investment fully or partially carried out by a third party. That can help attracting private capital which is key for increasing building renovation rates in the Union, bring expertise into the market and create

	Commission Proposal	EP Mandate	ST 10697/22 Council Mandate	Draft Agreement
	(120) Reflecting technological progress and the growing share of renewable energy sources in the electricity generation sector, the default coefficient for savings in kWh electricity should be reviewed in order to reflect changes in the primary energy factor (PEF) for electricity and other energy carriers . Calculations reflecting the energy mix of the PEF for electricity are based on annual average values. The ‘physical energy content’ accounting method is used for nuclear electricity and heat generation and the ‘technical conversion efficiency’ method is used for electricity and heat generation from fossil fuels and biomass. For non-combustible renewable energy, the method is the direct equivalent based on the ‘total primary energy’ approach. To calculate the primary energy share for electricity in cogeneration, the method set out in Annex II to this Directive is applied. An average rather than a marginal market position is used. Conversion efficiencies are assumed to be 100 % for non-combustible renewables, 10 % for	(120) Reflecting technological progress and the growing share of renewable energy sources in the electricity generation sector, the default coefficient for savings in kWh electricity should be reviewed in order to reflect changes in the primary energy factor (PEF) for electricity and other energy carriers . Calculations reflecting the energy mix of the PEF for electricity are based on annual average values. The ‘physical energy content’ accounting method is used for nuclear electricity and heat generation and the ‘technical conversion efficiency’ method is used for electricity and heat generation from fossil fuels and biomass. 210	Article 4 Energy efficiency targets	Article 4 Energy efficiency targets	Article 4 Energy efficiency targets	
Article 4(1)				
211	1. Member States shall collectively ensure a reduction of energy consumption of at least 9 % in 2030 compared to the projections of the 2020 Reference Scenario so that the Union's final	1. Member States shall collectively ensure a reduction of energy consumption of at least ~~9~~ <u>40</u> % in 2030 <u>in final energy consumption and 42,5 % in primary energy consumption</u>	1. Member States shall collectively ensure a reduction of energy consumption of at least 9 % in 2030 compared to the projections of the 2020 Reference Scenario so that the Union's final	

	Commission Proposal	EP Mandate	ST 10697/22 Council Mandate	Draft Agreement
	energy consumption amounts to no more than 787 Mtoe and the Union's primary energy consumption amounts to no more than 1023 Mtoe in 2030.¹ 1. The Union's energy efficiency target was initially set and calculated using the 2007 Reference Scenario projections for 2030 as a baseline. The change in the Eurostat energy balance calculation methodology and improvements in subsequent modelling projections call for a change of the baseline. Thus, using the same approach to define the target, that is to say comparing it to the future baseline projections, the ambition of the Union's 2030 energy efficiency target is set compared to the 2020 Reference Scenario projections for 2030 reflecting national contributions from the NECPs. With that updated baseline, the Union will need to further increase its energy efficiency ambition by at least 9 % in 2030 compared to the level of efforts under the 2020 Reference Scenario. The new way of expressing the level of ambition for the Union's targets does not affect the actual level of efforts needed.	compared to the projections of the ~~2020~~<u>2007</u> Reference Scenario so that the Union's final energy consumption amounts to no more than ~~787~~<u>740</u> Mtoe and the Union's primary energy consumption amounts to no more than ~~1023~~<u>960</u> Mtoe in 2030.¹ 1. <u>[1]</u> The Union's energy efficiency target was initially set and calculated using the 2007 Reference Scenario projections for 2030 as a baseline. The change in the Eurostat energy balance calculation methodology and improvements in subsequent modelling projections call for a change of the baseline. Thus, using the same approach to define the target, that is to say comparing it to the future baseline projections, the ambition of the Union's 2030 energy efficiency target is set compared to the 2020 Reference Scenario projections for 2030 reflecting national contributions from the NECPs. With that updated baseline, the Union will need to further increase its energy efficiency ambition by at least 9 % in 2030 compared to the level of efforts under the 2020 Reference Scenario. The new way of expressing the level of ambition for the Union's targets does not affect the actual level of efforts needed.	energy consumption amounts to no more than 787 Mtoe. Member States shall make efforts to collectively contribute to the indicative and the Union's primary energy consumption amountstargets amounting to no more than 1023 Mtoe in 2030.¹ 1. The Union's energy efficiency target was initially set and calculated using the 2007 Reference Scenario projections for 2030 as a baseline. The change in the Eurostat energy balance calculation methodology and improvements in subsequent modelling projections call for a change of the baseline. Thus, using the same approach to define the target, that is to say comparing it to the future baseline projections, the ambition of the Union's 2030 energy efficiency target is set compared to the 2020 Reference Scenario projections for 2030 reflecting national contributions from the NECPs. CHAPTER II				
236	CHAPTER II EXEMPLARY ROLE OF PUBLIC SECTOR	CHAPTER II EXEMPLARY ROLE OF PUBLIC SECTOR	CHAPTER II EXEMPLARY ROLE OF PUBLIC SECTOR	
Article 5				
237	Article 5 Public sector leading on energy efficiency	Article 5 Public sector leading on energy efficiency	Article 5 Public sector leading on energy efficiency	
Article 5(1), first subparagraph				
238	1. Member States shall ensure that the total final energy consumption of all public bodies combined is reduced by at least 1,7% each year, when compared to the year X-2 (with X as the year when this Directive enters into force).	1. Member States shall ensure that the total final energy consumption of all public bodies combined is reduced by at least ~~1,7%~~ 2 % each year, when compared to the year X-2 (with X as the year when this Directive enters into force).	1.a. Member States shall ensure that the total final energy consumption of all public bodies combined is reduced by at least 1,7% each year or alternatively by at least [1.9%] each year if excluding public transport or armed forces , when compared to the year X-2 (with X as the year	

	Commission Proposal	EP Mandate	ST 10697/22 Council Mandate	Draft Agreement
			when this Directive enters into forceArticle shall be transposed). To fulfil this obligation, Member States shall establish a baseline, which includes the final energy consumption of all public bodies for year X-2.	
Article 5(1), first subparagraph a				
238a			1.b. In a transitional period of four years after the transposition date of this article, the target set out in paragraph 1.a will be indicative. During the transitional period, Member States may use estimated consumption data, and four years after the transposition date of this Article Member States shall adjust the baseline and align the estimated final energy consumption of all public bodies to the actual final energy consumption of all public bodies.	
Article 5(1), first subparagraph b				

	Commission Proposal	EP Mandate	ST 10697/22 Council Mandate	Draft Agreement
238b			1.c. The obligation provided in paragraph 1a and the requirements provided in paragraphs 1.a and 1.b shall not include, until 31 December 2026, the energy consumption of public bodies in local administrative units [to be defined in Article 2 with reference to ESTAT] serving less than 50.000 inhabitants and, until 31 December 2029, the energy consumption of public bodies in local administrative units [to be defined in Article 2 with reference to ESTAT] serving less than 5.000 inhabitants.	
Article 5(1), second subparagraph				
239	Member States may take into account climatic variations within the Member State when calculating their public bodies' final energy consumption.	Member States may take into account climatic variations within the Member State when calculating their public bodies' final energy consumption.	1.d. Member States may take into account climatic variations within the Member State when calculating their public bodies' final energy consumption.	
Article 5(2)				

	Commission Proposal	EP Mandate	ST 10697/22 Council Mandate	Draft Agreement
240	2. Member States shall include, in their national energy and climate plans and updates thereof pursuant to Regulation (EU) 2018/1999, a list of public bodies which shall contribute to the fulfilment of the obligation set out in paragraph 1 of this Article, the amount of energy consumption reduction to be achieved by each of them and the measures they plan to achieve it. As part of their integrated national energy and climate reports pursuant to Article 17 of Regulation (EU) 2018/1999, Member States shall report to the Commission the final energy consumption reduction achieved annually.	2. Member States shall include, in their national energy and climate plans and updates thereof pursuant to Regulation (EU) 2018/1999, ~~a~~ <u>the</u> list of <u>all</u> public bodies which shall contribute to the fulfilment of the obligation set out in paragraph 1 of this Article, the amount of energy consumption reduction <u>and energy savings</u> to be achieved by each of them and the measures they plan to achieve it. As part of their integrated national energy and climate reports pursuant to Article 17 of Regulation (EU) 2018/1999, Member States shall report to the Commission the final energy consumption reduction achieved annually.	2. Member States shall include, in their national energy and climate plans and updates thereof pursuant to Regulation (EU) 2018/1999, ~~a list of public bodies which shall contribute to the fulfilment of the obligation set out in paragraph 1 of this Article~~ , the amount of energy consumption reduction to be achieved by ~~each of them~~ public bodies per sector and the measures they plan to achieve it. As part of their integrated national energy and climate reports pursuant to Article 17 of Regulation (EU) 2018/1999, Member States shall report to the Commission the final energy consumption reduction achieved annually.
